Human Skills for AI – Leadership Edition

Half-day intensive training – in-company, on-location

'Lead the Change Before It Leads You'

With the EU AI Act now in effect, every organization must ensure the safe and ethical use of AI — and that responsibility starts at the top. Yet, nearly half of companies report low trust in AI tools, often driven by fear, uncertainty, and risk aversion.

So how can you, as a leader, confidently guide your team through this transformation?

By developing the one element often overlooked in tech-driven change: **human skills.**

What's it about?

In an era of rapid transformation, the success of AI adoption doesn't depend on technology alone — it depends on human skills. This interactive half-day training focuses on understanding and developing the human skills leaders need to navigate change, build trust, and foster co-creation between humans and AI.

We explore what's holding leaders and teams back — from fear and perfectionism to resistance to change — and turn those blockers into levers for growth. You'll leave with clarity, confidence, and practical tools to be a role model for AI integration in your organization.

Note: *This is an intensive, high-value kickstart — designed to build insight, awareness and the first confident steps. This isn't just another training—it's a high-value reset that gives you clarity and confidence to lead AI adoption.*

What's the structure?

A balanced blend of short theory bursts (based on science), leadership reflection, interactive moments, and embodied practice:

- Check-in & introduction: human responses to change
- Growth Mindset Deep Dive: moving from resistance to adaptability
- Psychological safety & leadership presence
- Vulnerability as strength: leading without having all the answers

- Embodied confidence: feel leadership in your body, not just your head
- Human Skills Roadmap: what to focus on now, and what to grow next
- Final reflection, peer sharing, and take-aways

After this training, you will...

- Recognize mindset blockers in yourself and your team

- Create the psychological safety needed for AI adoption

- Understand how to lead with calm, presence and trust

- Act as a visible role model during change — without having to "know it all"

- Know which human skills to develop for future-proof leadership

- Take home tools and one clear commitment to act on right away

---

Because AI-readiness isn't just about technology — it's about people.
And it starts with you.
